Rubbn'Repair Wing Caps...tough protection against whatever the track throws at your car. Sprint, micro and midget racers now have a product that can be easily tailored to fit any wing configuration.

Rubbn'Repair Wing Caps offer drivers and teams:

- the look of carbon fiber (black or silver)
- strong, self-adhesive backing (no rivets)
- high-performance composite material

Rubbn'Repair Wing Caps can be customized to any size or shape in only a matter of minutes. The wing caps are hard and rigid, but when they are heated, they become soft and moldable. Teams can custom fit their wings with protection that stays put even under the hardest racing conditions. Within seconds, the wing caps harden again into a strong, lightweight protective cap that holds the new shape.

Benefits:

Self-adhesive

Moldable when warmed

Rigid and tough at racing temperatures

Strong protection

Customizable

Quick, easy application

Eliminates rivets

Affordable

Removable without wing damage

Rubbn'Repair Wing Caps are a cost-effective, reliable solution to protect expensive racing equipment. These wing caps are an evolution in protection of sprints, micros, midgets and more.
